

HEARTFLOW® SUPER B's

Nutritional Support for Healthy Homocysteine Levels*

Super B's Heartflow is a high-potency, liquid nutraceutical formula to support heart vessel health.* Its formulation specifically helps the body maintain proper homocysteine levels.* It also has the benefit of aiding hematologic, nervous and immune systems.*

Super B's Heartflow advanced liquid formula allows quicker absorption and use of its nutrients than tablets or pills, which must first dissolve in the digestive system before being absorbed and used.

Plus, Heartflow Super B's also includes full spectrum sources of Vitamin B including orange, watermelon, pomegranate and grapeseed extract. This additional phytonutrient blend boosts the completeness, potency and synergy of the B Vitamins.*

What is Homocysteine?

When the body digests protein, homocysteine is produced. Homocysteine is an amino acid derivative of protein metabolism. Scientific evidence shows that Folate, Vitamin B12 and Vitamin B6 are required for various enzymatic reactions involved in the metabolism of homocysteine.

Why is an understanding of homocysteine so important?

Normal levels of homocysteine in the body are necessary for maintaining the health and integrity of arterial walls, and cardiac function.*

It is also involved in maintaining the normal width of blood vessels, supporting the normal flow of blood through the vessels.*

Proper levels of homocysteine are also involved in the body systems associated with blood sugar, kidney and neurologic function.*

Heartflow SuperB's with Vitamin B12, Vitamin B6, and Methylfolate B9 provide the necessary co-factors to help the body properly convert homocysteine for overall cardiac health.* Its liquid format allows key nutrients to be absorbed quickly and easily by the body. Its great tasting and high potency formula provides the body nutritional support for overall wellness and wellbeing.*

ID# 11010

A Complementary Approach

Heartflow Super B's can be used in conjunction with other health strategies to support normal cardiac health.* As always, Eniva Health suggests working with a primary care health professional when using any supplement program.

Other nutrients than may provide support for heart health include*:

**CoEnzymeQ10 | L-Carnitine
D-Ribose | Omega9 Essential Fatty Acids
Multiple Antioxidants**

Regular exercise, proper sleep, a healthy diet, and lifestyle choices that reduce stress are all part of a heart-smart wellness plan.
